

Eurex Circular 055/19

Change of partition ID and/or multicast addresses for the FBTP, FBTS and FGBX products: new introduction date

Summary

The change of partition ID and/or multicast addresses for the FBTP, FBTS and FGBX products has been postponed from 13 May 2019 to **10 June 2019**.

Eurex Exchange is planning to make configuration changes for individual products in preparation for the introduction of Inter Product Spreads (IPS), following the launch of T7 Release 7.1. For the affected products, Eurex Exchange will re-assign the partition IDs and/or the multicast addresses for dissemination of market data. The following products will be affected by the changes:

- FBTS
- FBTP
- FGBX

The reconfiguration of the affected products to the new partitions and multicast groups will become effective in the production environment as of **10 June 2019**.

Change of partition ID and/or multicast addresses for the FBTP, FBTS and FGBX products: new introduction date

Eurex Exchange is planning to make configuration changes for individual products in preparation for the introduction of Inter Product Spreads (IPS) following the launch of T7 Release 7.1. For the affected products, Eurex Exchange will re-assign the partition IDs and/or the multicast addresses for dissemination of market data. The following products will be affected by the changes:

- FBTP
- FBTS
- FGBX

The reconfiguration of the affected products to the new partitions and/or multicast groups will become effective in the production environment as of 10 June 2019.

The existing port numbers will remain unchanged and the product reference data will be modified accordingly to reflect the new multicast addresses.

The following tables provide an overview of the products which will be affected, the partitions to which the products will be transferred to (if applicable) and the new multicast addresses which will be used for the dissemination of the market data for the respective interface.

1. Partition

Product ID	Partition (old)	Partition (new)
FBTP	3	2
FBTS	6	6
FGBX	6	2

2. EMDI Interface

Product ID	Snapshot (A)	Snapshot (B)	Incremental (A)	Incremental (B)
FBTP	224.0.50.58	224.0.50.186	224.0.50.59	224.0.50.187
FBTS	224.0.50.54	224.0.50.182	224.0.50.55	224.0.50.183
FGBX	224.0.50.58	224.0.50.186	224.0.50.59	224.0.50.187

3. EOBI Interface

Product ID	Snapshot (A)	Snapshot (B)	Incremental (A)	Incremental (B)
FBTP	224.0.114.34	224.0.114.66	224.0.114.35	224.0.114.67
FBTS	224.0.114.38	224.0.114.70	224.0.114.39	224.0.114.71
FGBX	224.0.114.34	224.0.114.66	224.0.114.35	224.0.114.67

The reference data containing all the respective changes will be provided following the start of the T7 Trading system for the business day Monday, 10 June 2019.

Because of these changes, the products FBTP and FGBX will receive the same multicast addresses and partition ID as the product FGBL. The product FBTS will receive the same multicast addresses and partition ID as the product FGBS.

Please note:

Moving products from one partition to another may lead to a scenario where GTC/GTD orders entered and owned by one high-frequency session come to reside on two different partitions. As a high-frequency session login is always partition specific (via a partition specific gateway), the respective owning session needs to login to the new partition to manage orders for products which have been moved. To manage orders for products which have not been moved, the owning session needs to login to the old partition.

If you have any questions or need further information, please write an e-mail to client.services@eurexchange.com.
