The company Taylor Wimpey Plc has announced the payment of a special dividend of GBP 0.1099 per share.

More information about this transaction is available on the company's website under www.taylorwimpey.co.uk.

The payment of the special dividend will result in an adjustment of the above mentioned contracts.

Procedure

R-Factor Method

Determination of adjustment factor (R-factor)

S1	Closing auction price of the share
S2	S1 minus special dividend
R-Factor	S2 / S1

Futures

1. Adjustment of contract size and variation margin

- The adjustment uses the same R-factor as used for options
- To adjust the calculation of the variation margin of the following exchange trading day, settlement prices of the last cum trading day will be multiplied by the R-Factor.
- The new contract size will be calculated as follows:
 Contract size new = contract size old / R-factor
- All outstanding orders and quotes will be deleted after close of trading on the last cum trading day.
- The adjustment also refers to existing positions in TES flexible futures.

2. Introduction of a new contract

- A new single stock futures contract with standard contract size 1000.
- The exact introduction date will be published via a circular.
- As soon as the new contract is available for trading and there are no more contract months with open interest in the original contract, trading in this contract will be put on "HALT" and finally discontinued.
- Furthermore, no new contract months will be introduced in the original contract TWFG.

If there is no open interest on the last cum trading day after close of trading in one of the original contracts TWFG, no adjustment will be made for this contract and no new contract will be introduced to replace this.
