1 Introduction

This document describes all the reports distributed for Eurex Clearing – Securities Clearing Service (C7 SCS).

This document is intended to provide members with relevant information concerning reports (viz. offered reports, layout). The purpose of the Eurex Clearing XML Reports – Reference Manual is

- to explain the content of the reports, and
- to describe each report in detail.

Additional information related to generic text reports is included.

Please note that all reports are provided exclusively via the Common Report Engine.

For products not yet covered by C7 SCS and cleared by Eurex Clearing's Securities CCP (Securities CCP), Eurex Clearing's Securities CCP continues to generate and distribute the corresponding reports as done currently. Report Description for those reports continues to be described as part of the Securities CCP documentation being available under the following path:

www.eurex.com -> Clear -> Support -> Initiatives & Releases -> CCP Releases

The report ordering form for Securities CCP reports is available on:

www.eurex.com -> Trade -> Find -> Forms

Report Generation and Distribution

Reports are available in XML format. For some reports additionally a printable text format is available.

- Reports in XML format for Clearing Members and Settlement Institutions are automatically provided and must not be ordered explicitly.
- Reports in XML format for Trading Members must be explicitly ordered.
- Reports in printable text are optional and must be explicitly ordered.

The report ordering form for C7 SCS reports is available on:

www.eurex.com -> Clear -> Find -> Forms

Separate Reports for Securities CCP and C7 SCS

With the introduction of the new C7 SCS system for equities and bonds business, transaction data and historic data were not migrated to the new platform. Pending trades and delivery instructions in equities and bonds from trading locations XETR, XFRA and XEUR continue to be processed and completed in current Securities CCP system.

Consequently, such trades and delivery instructions continue to be reported on current Securities CCP reports, while new transactions concluded after C7 SCS Release 1.0 are reported on new C7 SCS reports.

With C7 SCS Release 1.2 repo transactions as well as physical deliveries in UK and Irish securities resulting from Eurex derivatives (XEUR) which settle at Euroclear UK & Ireland (CCO, 'CREST') continue to be reported in Securities CCP reports only.

Common Reports for Securities CCP and C7 SCS

With the introduction of changes to comply with Central Securities Depositories Regulation (CSDR), two reports (CE840 and CE845) are provided which contain penalty information of both systems (Securities CCP and C7 SCS).

The Delivery References in the report allow to differentiate between both systems as delivery references starting with POA or ALM belong to Securities CCP and the others to C7 SCS.

2 XML Reports Concepts used by Eurex Clearing

2.1 Eurex Clearing Terminology

Throughout the Eurex Clearing C7 SCS XML Reports documentation, specific terms are used to refer to certain objects known to C7 SCS. To avoid misunderstandings the most important terms are described in this paragraph.

Trade Types

The term **Single Trades** refers to trades received from trading locations. These can be FWB Transactions or Physical Delivery Transactions resulting from Eurex Derivatives.

The term **Net Position Trades** refers to trades resulting out of the daily C7 SCS Trade Date Netting process of Single Trades per Net Processing Unit considering the corresponding applicable Processing Method. Please note, that in case of Gross processing a Net Position Trade is generated for each affected Single Trade.

Net Position Trades can be

- securities against payment (standard case),
- securities free of payment,
- Cash-Only or
- Flat (Zero), i.e. quantity and amount equal 0.

Cash-Only and Flat (Zero) Net Position Trades can only occur if Strange Net Option is chosen as 'NET/SPLIT' or Linking before Aggregation service is used.

Participant Types

The term **Trading Member (TM)** refers to financial institutions, financial services institutions and banking organizations, who trade in "CCP eligible" relevant instruments. TMs are entitled to execute proprietary and agent trades. TMs are not intended to operate directly with C7 SCS but can receive reports containing data regarding their trades and delivery instructions.

The term **Clearing Member (CM)** refers to a Eurex Clearing participant being entitled to perform the clearing of trades in "CCP eligible" instruments. In addition, CMs are liable for the timely fulfillment of all payment and delivery obligations resulting from Net Position Trades the CM is performing the clearing for. These trades relate either to the CM itself or to one of its TMs. Consequently CMs receive reports containing data of trades and delivery instructions belonging to themselves or one of their TMs.

The term **Settlement Institution (SI)** refers to a Eurex Clearing participant performing securities settlement via accounts at one or several of the supported (I)CSDs. SIs provide securities services between Eurex Clearing AG and the Clearing Member. However, the responsibility towards Eurex Clearing AG to fulfill trades by means of orderly settlement remains with the CM. SIs receive reports containing data of trades and delivery instructions belonging to one of their settlement accounts independent of the CM the trade belongs to.

A participant might perform the functions associated with one or more of these participant types, given he complies with the associated prerequisites.

Accounts

Account Types: For the Single Trades from T7 and C7 (i.e. trading location XETR, XFRA, XEUR) it is distinguished between proprietary and agent business. This account type information will be used in C7 SCS for account setting and net processing purposes.

- For proprietary business: "PP" account
- For agent business (XETR, XFRA): "A1" account
- For agent business (XEUR): "A1" to "A9" account (Flex Accounts will be mapped to account type "A1")

Position Accounts: For the Single Trades from C7 (i.e. trading location XEUR) also the position/flex account information is received. This position account information will be used in C7 SCS for net processing purposes.

- For Eurex (i.e. trading location XEUR): "A1" to "A9" + flex accounts.

Settlement Accounts: Settlement accounts setup at the (I)CSD are reflected in the C7 SCS system for the settlement of transactions at different (I)CSDs and T2S. Settlement accounts can be assigned to participants acting as CM and/or SI depending on the participant's roles.

2.2 XML Report Layout

The XML Report layout consists of the basic elements structures, structure members and data types.

2.2.1 Structures

Structures are ordered collections of structure members.

They may contain fields and/or substructures as members, forming a structure tree. On top level (the root of each structure tree) there is the main report structure.

Most structures are defined as a part of one report. Structures used in several reports are called common structures.

Naming conventions for structures are:

<i>reportName</i>	Main structure of a report
<i>reportName***Grp</i>	Sub structure of a report
<i>reportName***KeyGrp</i>	Sub structure of a report which contains key fields

2.2.2 Structure Members

A structure member is either a field or another (sub-)structure. A structure member may be enriched by attributes to define report specific properties.

Fields are defined by their data type and share the name of their data type. Substructures may occur once or multiple times in a structure. The name of a substructure member is equal to the substructure name.

Each field and structure occurs at a specific place in the sequence of fields in the substructure tree of a report. Substructure can represent an exception, in the sense that they can occur multiple times.

Structure members may be mandatory or optional. Optional members may be omitted in the XML report.

2.2.3 Data Types

Data Types describe context-independent properties of a field, like its format and length. The format of a data type may be alphanumeric, numeric or signed numeric.

These properties are independent of the report where a field with this data type occurs. Since a field in a structure must have the same name as its data type, this implies that two fields with the same name always have the same data type.

2.2.4 Rules for creating the XML Structure

2.2.4.1 Main Report Structure

The report XML structure is enclosed in the tag

```
<reportName>
  <reptHeader>
    ...
  </reptHeader>
  <reportNameGrp>
    ...
  </reportNameGrp>
</reportName>
```

2.2.4.2 Substructures

Substructures are written as follows:

```
<structureName>
  ...
</structureName>
```

The structure members occur in the sequence as they are defined in the XML Report layout. Optional members may be omitted, if they contain no data.

In case of a multiple occurrence, the <structureName> element is repeated.

2.2.4.3 Field Values

Field values are written as

```
<fieldName>fieldValue</fieldName>
```

or, if no value is given for a mandatory field,

<fieldName/>

Optional fields are omitted if no value is given.

Alphanumeric field values are written to the XML Report with their complete field length.

Examples:

<membClgIdCod>ABCFR</membClgIdCod>

Numeric values with precision 0 are written in the format DD...D without leading zeroes (D denotes a digit 0, 1, ..., 9).

Numeric values with precision > 0 are written in the format DD...D.D...D, where the number of trailing digits is given by the precision.

Example:

<totAmnt>12042.56</totAmnt>

Numeric signed values are prefixed with a plus ('+') or minus ('-') sign.

Example:

<totalRemAmntIsin>-23456.79</totalRemAmntIsin>

2.2.5 Rules for Text Reports

The text reports created from the XML reports serve to display the contained data in a human readable format. Only the XML reports are suitable for automatic processing.

Eurex Clearing strongly advises against any form of text report processing, e.g. by parsing data from the text report content.

The following sections describe some generic rules how the layout of the text reports is determined from the XML report structure.

2.2.5.1 Generic Text Report Structure

The creation of generic text reports uses the following rules:

- The global layout of a generic text report is determined by the XML report data structure.
 - Data rows are shown in the sequence defined in the XML report.
 - Fields are shown in the sequence defined in the XML report.
 - Column widths are determined by the maximum of heading length and data field length.
 - Column headings are written into one line.
 - Spacing between columns is always one.
 - Underlines (indicating the column width) are provided for the field width of the first row.
 - Lines are wrapped, if they are longer than 132 characters.
 - Starting position for wrapped lines is one character indented from second field on the first line.
-

2.2.5.2 Field Values

The display of field values adheres to the following rules:

- The field value display is determined by the field specific format and the specific report context.
- The field column heading is determined by the field, dependent of the report context.
- Alphanumeric values are displayed left justified with the original value retrieved from the XML Report data. Depending on the specific report, values from the XML reports are mapped to some decode in the text report.
- Numeric values are displayed right justified according to their field specific display format with the original value retrieved from the XML Report data.

The specific rules for numeric values are

- The decimal separator is a point.
- No leading zeroes are displayed.
- All decimal digits given by the field precision are displayed (e.g. 1.200 for precision 3).
- "Minus signs" are written as prefix or suffix of the number.
- It is possible to have a thousand separator for the text format (e.g. 12,345,678.90).

2.3 Common Report Engine

The Common Report Engine is the exclusive source for report files for Eurex Clearing members. It is an FTP solution based on an SFTP report server that allows participants to easily retrieve all of their reports from a single source.

All transactional and participant specific C7 SCS reports are available in the same participant-specific directory structure as used for Securities CCP reports. C7 SCS and Securities CCP Reports are distinguished via unique Report IDs.

Non-transactional and non-participant specific reports and files are available in the public area. Such reports are tagged as **CRE Area : public** in this manual.

The Common Report Engine can be accessed via leased line connectivity or via the internet.

To access the Common Report Engine, a specific user account for the Common Report Engine must be setup and a public key must be uploaded in the Member Section of the Eurex website (<https://www.eurex.com/ec-en/find/Member-Section>). Participants having already an activated user account for the Common Report Engine to receive Securities CCP reports do not have to take any further actions regarding a proper user setup.

Please note that reports will only be generated for participants if an activated Common Report Engine user account exists.

The participant is responsible for the user account setup on the Common Report Engine for all markets applicable.

Detailed information to the Common Report Engine is provided on the Eurex Homepage:

www.eurex.com -> Clear -> Support -> Technology -> Common Report Engine

2.4 Available Reports

The table below provides an overview of available C7 SCS reports including a reference to the corresponding member reports currently available for the CCP. As for the CCP the Report ID gives an indication for which members a report is available:

- Report ID ending with '0' or '5' - Clearing Members
- Report ID ending with '1' or '6' - Settlement Institutions
- Report ID ending with '2' or '7' - Trading Members

C7 SCS Report ID	Report Name	Delivery Time ¹	RAW (XML) Format	Printable Format	Current CCP Reports	Description ²
CE860/ CE861/ CE862	Pending Delivery Report	EoD, T(+x)	Yes	Yes	CE260/ CE261/ CE262	Portion of Net Position Trades that has not yet settled. Corporate action feedback and released/on-hold quantity are considered.

3 Introduction to XML Reports

3.1 XML Report Characteristics

The XML report descriptions contain the following information:

Description	A textual description of the functional contents of the report.
Frequency	The frequency or the specific events at which the report is created.
Availability	The group of members (e.g. clearing members, settlement institutions) to which the report is available. Please refer to <i>section 3.2</i> for a detailed description of report availability.
XML Report Structure	A description of the composition of groups and tags that are used with the XML report. Underlined items represent groups; the contained tags are identified by indent level. Additional information is provided on the cardinality of subgroups. Please refer to <i>section 3.3</i> for a description of cardinalities.
M/O	A usage code to indicate whether a report tag is mandatory or optional. Please refer to <i>section 3.4</i> for a detailed description.
Text Report Heading	<p>The heading of each tag when printed in a text report. The heading depends on the tag, but may be defined different in a specific report context. Tags bound together in a group may be concatenated under one heading.</p> <p>If the text report heading is marked "(XML only)", the tag content is not written into the text report.</p>
Text Report Structure	<p>A generic description of the layout that is used with the text report. Each text report field is printed once with his heading and the generic text format which is used to display the value.</p> <p>Alphanumeric values are filled up with X, according to the field length. Numeric values are filled up with 9, together with thousand separators, decimal points and signs if applicable.</p> <p>Please remark that the layout of text reports may be subject to change without further notice.</p>

3.2 Report Availability

Reports are created and available to different groups of members.

Availability of reports to Eurex Clearing participants depends on the roles assigned to this participant.

Available for	Description
Clearing Members	Report is available for clearing members containing their individual data and the data of their associated trading members.
Settlement Institutions	Report is available for settlement institutions containing the data belonging to their settlement accounts.
Trading Members	Report is available for trading members containing their individual data.

Table 3.1 - Report Availability

The creation and distribution of XML reports for Trading Members as well as the creation of a printable version for all applicable reports depends on the Report Selection settings a Eurex Clearing participant has chosen.

3.3 Structure Cardinality

Any substructure may be contained zero, one or multiple times in a structure.

The XML report descriptions contains a cardinality information for each structure in the form

structure

or

structure, repeated *cardinality* times:

Cardinality	Description
<i>(none)</i>	Substructure occurs exactly one time
<i>m</i>	Substructure occurs exactly <i>m</i> times
<i>m ... n</i>	Substructure occurs minimal <i>m</i> , maximal <i>n</i> times
<i>m ... variable</i>	Substructure occurs <i>m</i> to any number times

Table 3.2 - Structure Cardinality Descriptors

3.4 Usage Code

The XML report descriptions contain usage codes for each tag. These codes provide information on whether a tag is mandatory or optional. *Table 3.3* below lists all applicable usage codes and provides a description.

Usage Code	Explicit	Field Usage Description
m	mandatory	Tag occurs always (but may contain an empty string)
o	optional	Tag will be omitted, if no value is given.

Table 3.3 - Field Usage Codes

4.2 CD - Cash Settled Transactions Report

4.2.1 CD850 Settled Cash Transactions Report

Description	<p>The report contains all cash transactions that have been booked (and therefore considered as paid) on the current C7 SCS business day (value date equals current C7 SCS business day).</p> <p>The report includes manually generated cash transactions as well as cash transactions automatically created as a result of netting (Cash-Only Net Position Trades created due to strange nets). Cash transactions related to payments initiated by an (I)CSD in context of corporate actions/income events (dividends, interest payments, transformations in cash) are not reported in this report.</p> <p>Cash transactions for Cash-Only Net Position Trades reported on this report can be matched to the settlement information of the Cash-Only Net Position Trade on the Settled Delivery Report. For manually generated cash transactions the Net Position Trade ID is shown as 'NA' and Order Number is left blank as such transactions might relate to more than one Net Position Trade.</p> <p>The report is sorted per Clearing Member, Currency, Cash Settlement Location, Cash Settlement Account, Cash Value Date, Cash Settlement Run, Delivery Settlement Location, Delivery Settlement Account, Trading Member, Account Type and Cash Transaction Type. Cash transactions are shown in chronological order.</p> <p>The report provides totals for debit and credit cash amounts per Cash Transaction Type, Account Type, Trading Member, Settlement Account, Cash Settlement Account, Cash Settlement Location and Clearing Member per currency.</p> <p>The report is generated at the end of each business day (EoD). In case no data are to be reported for a business day an empty report is provided (NO DATA Report).</p>
Frequency	Daily.

4.3.3 CE860 Pending Delivery Report

Description	<p>This report contains all Delivery Instructions that are partially pending or full pending on the current C7 SCS business day including Cash-Only Delivery Instructions resulting from strange nets. Settlements with Actual Settlement Date greater than current C7 SCS business day due to settlement after business day shift at (I)CSD will be considered as pending in C7 SCS and will be reported in Pending Delivery Report. However, the same will be reported as SETTLED on the next C7 SCS business day in Settled Delivery Report. The report shows remaining quantity and remaining amount per Delivery Instruction and provides a reference to the Net Position Trade belonging to this Delivery Instruction. For Flat (Zero) Net Position Trades no Delivery Instructions are created and these trades are reported on Net Position Trade level until Contractual Settlement Date is reached.</p> <p>Report provides multiple references per Delivery ID that can be used by members to unambiguously locate relevant Delivery Instructions in their systems and perform potential modifications at (I)CSDs. 4.3.4 CE861 Pending Delivery Report

Description

This report contains all Delivery Instructions that are partially pending or full pending on the current C7 SCS business day including Cash-Only Delivery Instructions resulting from strange nets. Settlements with Actual Settlement Date greater than current C7 SCS business day due to settlement after business day shift at (I)CSD will be considered as pending in C7 SCS and will be reported in Pending Delivery Report. However, the same will be reported as SETTLED on the next C7 SCS business day in Settled Delivery Report. The report shows remaining quantity and remaining amount per Delivery Instruction and provides a reference to the Net Position Trade belonging to this Delivery Instruction. For Flat (Zero) Net Position Trades no Delivery Instructions are created and these trades are reported on Net Position Trade level until Contractual Settlement Date is reached.

Report provides multiple references per Delivery ID that can be used by members to unambiguously locate relevant Delivery Instructions in their systems and perform potential modifications at (I)CSDs. These references are:

a-Delivery Reference: unique identifier generated by C7 SCS and sent to (I)CSD

b-CSD Reference: generated by (I)CSD and only applicable for CBF representing the CASCADE reference

c-Underlying Reference: original Delivery Reference in case Corporate Action events applied on a Delivery Instruction

d-Delivery ID: unique identifier generated by C7 SCS for internal referencing

Delivery Instructions are reported per Clearing Member, Settlement Location, Settlement Account, Currency, ISIN, Account Type, Trading Member and Type of Information.

Type of Information is used to distinguish between:

1-NET DELIVERY INFORMATION: Pending Delivery Instructions/Net Position Trades resulting out of Net or Aggregate processing

2-GROSS DELIVERY INFORMATION: Pending Delivery Instructions/Net Position Trades resulting out of Gross processing

Within each block the Delivery Instructions are sorted by Delivery ID and their Contractual Settlement Date starting with the most overdue settlements. In case portions of remaining quantity and remaining amount of trades are not reflected in any active Delivery Instruction at the (I)CSD (e.g., in case of Buy-in processing or Flat (Zero) Net Position Trades), these portions are reported per Trade sorted by buy/sell indicator and trade number in ascending order and with Delivery ID 'NA'. In case the Delivery ID is filled with 'NA', delivery instruction specific fields as remaining and total instructed quantity/amount and buy/sell indicator are not filled.

The report provides totals for pending amounts per Type of Information, Trading Member, Account Type, ISIN, Settlement Location/ Settlement Account per currency.

In case a trade or delivery instruction was created/adjusted due to a corporate action processed by and received from (I)CSD before creation of the report, the respective corporate action identifier (CSD's CORP ID) is reported.

The report is generated at the end of each business day (EoD). In case no data are to be reported for a business day an empty report is provided (NO DATA Report).

4.3.6 CE870 Settled Delivery Report

Description

This report contains all partial or full settlements for Delivery Instructions with Actual Settlement Date equal to current C7 SCS business day. The settlement of Cash-Only Delivery Instructions and Flat (Zero) Net Position Trades resulting from strange nets is also reported on this report. Settlements with Actual Settlement Date greater than current C7 SCS business day due to settlement after business day shift at (I)CSD are not considered and will be reported on the next C7 SCS business day.

In opposite to the Pending Delivery Report, partial settlements are shown individually and not as one aggregated entry per Delivery Instruction. The report shows per Delivery Instruction the quantity and amount settled with this settlement confirmation and provides the information whether the Delivery Instruction is fully or partially settled.

Additionally, the reference to the Net Position Trade belonging to this Delivery Instruction including the settlement status of the Net Position Trade is provided. It is possible, that a Net Position Trade is settled via multiple Delivery Instructions being fully, partially, or not at all settled. Consequently, the settlement status of the Net Position Trade might deviate from the settlement status of an individual Delivery Instruction.

Partial settlements which took place on the current C7 SCS business day before cancelling or aborting a Delivery Instruction will be reported on the corresponding Settled Delivery Report depending on the Actual Settlement Date. Consequently, it is possible that the Settled Delivery Report contains partial settlements for a Delivery Instruction which was already aborted or cancelled on the previous C7 SCS business day.

Report provides multiple references per Delivery ID that can be used by members to unambiguously locate relevant Delivery Instructions in their systems and perform potential modifications at (I)CSDs. These references are:

a-Delivery Reference: unique identifier generated by C7 SCS and sent to (I)CSD

b-CSD Reference: generated by (I)CSD and only applicable for CBF representing the CASCADE reference

c-Underlying Reference: original Delivery Reference in case of Corporate Action events applied on a Delivery Instruction

d-Delivery ID: unique identifier generated by C7 SCS for internal referencing

Delivery Instructions are reported per Clearing Member, Settlement Location, Settlement Account, Currency, ISIN, Account Type, Trading Member and Type of Information.

Type of Information is used to distinguish between:

1-NET DELIVERY INFORMATION: Settlement for Delivery Instructions/Net Position Trades with applied Net or Aggregate processing

2-GROSS DELIVERY INFORMATION: Settlement for Delivery Instructions/Net Position Trades with applied Gross processing

3-BUY-IN OR CASH SETTLED: Settlement of Net Position Trades for which Buy-in processing was successfully executed

Within each block the Delivery Instructions are sorted by Delivery ID and listing partial settlements in chronological order. In case no settlement confirmation was received from (I)CSD or settlement took place as part of Buy-in process (including cash settlement), such settlements are reported per Trade sorted by buy/sell indicator and trade number in ascending order and with Delivery ID 'NA'. This applies for reporting the settlement of Flat (Zero) Net Position Trades as well, which will be automatically set to SETTLED at Contractual Settlement Date on Net Position Trade level, as no Delivery Instructions are created for such trades. In case the Delivery ID is filled with 'NA', delivery instruction specific fields as settled and total instructed quantity/amount and buy/sell indicator are not filled.

The report provides totals for settled amounts per Type of Information, Trading Member, Account Type, ISIN, Settlement Location/Settlement Account per currency.

In case a trade or delivery instruction was created/adjusted due to a corporate action processed by the (I)CSD, the respective corporate action identifier (CSD's CORP ID) is reported.

The report is generated at the end of each business day (EoD). In case no data are to be reported for a business day an empty report is provided (NO DATA Report).

The report shows per Delivery Instruction the quantity and amount settled with this settlement confirmation and provides the information whether the Delivery Instruction is fully or partially settled.

Additionally, the reference to the Net Position Trade belonging to this Delivery Instruction including the settlement status of the Net Position Trade is provided. It is possible, that a Net Position Trade is settled via multiple Delivery Instructions being fully, partially, or not at all settled. Consequently, the settlement status of the Net Position Trade might deviate from the settlement status of an individual Delivery Instruction.

Partial settlements which took place on the current C7 SCS business day before cancelling or aborting a Delivery Instruction will be reported on the corresponding Settled Delivery Report depending on the Actual Settlement Date. Consequently, it is possible that the Settled Delivery Report contains partial settlements for a Delivery Instruction which was already aborted or cancelled on the previous C7 SCS business day.

Report provides multiple references per Delivery ID that can be used by members to unambiguously locate relevant Delivery Instructions in their systems and perform potential modifications at (I)CSDs. These references are:

a-Delivery Reference: unique identifier generated by C7 SCS and sent to (I)CSD

b-CSD Reference: generated by (I)CSD and only applicable for CBF representing the CASCADE reference

c-Underlying Reference: original Delivery Reference in case of Corporate Action events applied on a Delivery Instruction

d-Delivery ID: unique identifier generated by C7 SCS for internal referencing

Delivery Instructions are reported per Clearing Member, Settlement Location, Settlement Account, Currency, ISIN, Account Type, Trading Member and Type of Information.

Type of Information is used to distinguish between:

1-NET DELIVERY INFORMATION: Settlement for Delivery Instructions/ Net Position Trades with applied Net or Aggregate processing

2-GROSS DELIVERY INFORMATION: Settlement for Delivery Instructions/ Net Position Trades with applied Gross processing

3-BUY-IN OR CASH SETTLED: Settlement of Net Position Trades for which Buy-in processing was successfully executed

Within each block the Delivery Instructions are sorted by Delivery ID and listing partial settlements in chronological order. In case no settlement confirmation was received from (I)CSD or settlement took place as part of Buy-in process (including cash settlement), such settlements are reported per Trade sorted by buy/ sell indicator and trade number in ascending order and with Delivery ID 'NA'. This applies for reporting the settlement of Flat (Zero) Net Position Trades as well, which will be automatically set to SETTLED at Contractual Settlement Date on Net Position Trade level, as no Delivery Instructions are created for such trades. In case the Delivery ID is filled with 'NA', delivery instruction specific fields as settled and total instructed quantity/ amount and buy/ sell indicator are not filled.

The report provides totals for settled amounts per Type of Information, Trading Member, Account Type, ISIN, Settlement Location/Settlement Account per currency.

In case a trade or delivery instruction was created/adjusted due to a corporate action processed by the (I)CSD, the respective corporate action identifier (CSD's CORP ID) is reported.

The report is generated at the end of each business day (EoD). In case no data are to be reported for a business day an empty report is provided (NO DATA Report).

4.3.9 CE890 Net Clearing Report - XEUR

Description	<p>This report contains Net Position Trades created on the current C7 SCS business day for Physical Delivery Transactions received from trading location XEUR as a result of Exercise/ Assignment or Notification/ Allocation (In the following referenced as Single Trades). Net Position Trades are reported per Clearing Member, Settlement Location, Settlement Account, Currency, ISIN, Trading Member, Account Type and Trade Date.</p> <p>Detailed information about the Single Trades is provided as well. The Net Position Trade ID can be used to identify which Single Trades belong to a particular Net Position Trade.</p> <p>All Net Position Trades and Single Trades referencing the same Net Position Trade ID are listed together including Cash-Only Net Position Trades potentially created due to Strange Net processing. Flat (Zero) Net Position Trades are reported as well on this report.</p> <p>A Net Position Trade representing a physical delivery request is always reported first followed by Cash-Only Net Position Trades and Single Trades referencing the same Net Position Trade ID. The Single Trades are sorted by Trading Location and Trade Number. If a Single Trade is split into one surplus and one 'no surplus' part during the netting process each part will be reported separately.</p> <p>After reporting Single Trades and their reference to the corresponding Net Position Trade further reporting is provided for Net Position Trades and Delivery Instructions. There is no further information on Single Trade level provided.</p> <p>The report also provides a Delivery Reference that represents the C7 SCS generated reference of Delivery Instructions associated with a Net Position Trade. This reference is sent to the respective (I)CSDs and can be used by members to identify the Delivery Instruction in (I)CSD reporting. Please note that for Flat (Zero) Net Position Trades no Delivery Instruction will be created and consequently, no Delivery Reference is provided on the Net Clearing Report.</p> <p>The report is generated each business day after completion of Trade Date Netting for trading location XEUR. In case no data are to be reported for a business day an empty report is provided (NO DATA Report).</p>

5 Introduction to Report Tag Descriptions

This is a description of the tags of XML reports. An overview of the tag descriptions is given first.

5.1 Tag Characteristics

The characteristics of each tag are detailed giving the following information.

Description	A short description of the tag's functional meaning.
Format	Defines the format and size of the tag. <i>Table 5.1</i> describes common formats for tags.

Format	Description	Example
alphanumeric n	Text of maximal length n, stored as string.	A tag with format "alphanumeric 6" may contain the values "TRD001" or "ABC" or "".
numeric n [, m]	Number with n significant digits and, if given, precision m. The number is stored as a string containing the decimal point if applicable.	A tag with format "numeric 5, 2" might contain the values "314.15" or "3.14" or "0.00".
numeric signed n [, m]	Signed number with n significant digits and, if given, precision m. The number is stored as a string prefixed with the "+" or "-" sign and containing the decimal point if applicable.	A tag with format "numeric signed 5, 2" may contain the values "+314.15" or "+3.14" or "-314.15" or "+0.00".
DateFormat	Date, stored as a string in the format YYYY-MM-DD	A DateFormat tag may contain the value "2005-03-28".
TimeFormat	Time, stored as a string in the format hh:mm:ss.cc	A TimeFormat tag may contain the value "23:59:59.99"
TimeFormat18	Time, stored as a string in the format hh:mm:ss.cc.ccc.ccc	A TimeFormat154 tag may contain the value "23:59:59.99.999.999"

Table 5.1 - Tag Formats

Valid Values Some tags have a predefined limited set of values they may contain.

Decodes The decoded literals belonging to the valid values constants as used in the generic text reports.

Descriptions

A short description of the value's functional meaning.

Where used

A reference to the XML reports which contain this tag in their structure.
